

PRODUCT CATALOGUE 2026

Research Grade Peptides

Longevity | Rebuild | Regrowth

1

TB 500 (Thymosin Beta 4)

5mg x 1 Vial

2-2.5mg twice per week

Commonly studied for its potential role in tissue repair, recovery acceleration, and reducing inflammation. Popular among researchers studying wound healing and muscle regeneration.

2

MGF (Mechano Growth Factor)

1mg x 1 Vial

100-200mcg post-exercise

A splice variant of IGF-1, researched for its role in muscle repair and satellite cell activation following mechanical stress or injury.

3

AOD 9604

5mg x 1 Vial

300mcg daily

A modified fragment of HGH, studied for its potential to regulate fat metabolism and support body composition without affecting blood sugar levels.

4

Follostatin (FST-334)

1mg x 1 Vial

100mcg per day

A naturally occurring protein studied for its ability to inhibit myostatin, potentially supporting muscle growth and reducing fat mass in research models.

5

Ipamorelin

5mg x 1 Vial

200-300mcg 2-3x daily

A selective growth hormone secretagogue studied for promoting GH release with minimal impact on cortisol or prolactin levels.

6

Hexarelin Acetate

2mg x 1 Vial

200mcg 2-3x daily

A potent GH-releasing peptide researched for its role in stimulating growth hormone secretion and potential cardioprotective properties.

7

GHK-Cu

50mg x 1 Vial

1-2mg per day

A naturally occurring copper peptide studied for skin regeneration, anti-aging effects, wound healing, and potential anti-inflammatory properties.

8

Reta Pro (Retatrutide)

5mg x 1 Vial

2-4mg once weekly

A triple receptor agonist (GIP, GLP-1, Glucagon) under research for its powerful effects on fat loss, metabolic regulation, and appetite suppression.

11

NAD+

500mg x 1 Vial

250-500mg per day

A critical coenzyme studied extensively for its role in cellular energy production, DNA repair, longevity pathways, and cognitive function support.

12

BPC-157 + TB500

10mg x 1 Vial

250-500mcg daily

A powerful recovery blend combining BPC-157 and TB-500, researched for accelerated healing of tendons, ligaments, muscles, and gut tissue.

13

BBG70

70mg x 1 Vial

As per research protocol

A research peptide blend studied for performance enhancement, recovery support, and overall wellness optimization in advanced research models.

14

Glutathione

1500mg x 1 Vial

600-1200mg per session

The body's master antioxidant, studied for detoxification, immune support, skin brightening, anti-aging benefits, and cellular protection.

17

Tesamorelin

2mg x 1 Vial

1-2mg daily

A GHRH analogue studied for stimulating GH release, reducing visceral fat, and potential cognitive and cardiovascular research applications.

18

CJC1295 + Ipamorelin

5mg x 1 Vial

100-300mcg 2-3x daily

A synergistic GH-releasing blend combining CJC-1295 and Ipamorelin for sustained growth hormone pulses, recovery, and body composition research.

19

Epitalon

10mg x 1 Vial

5-10mg daily for 10-20 days

A tetrapeptide studied for its role in telomere elongation, pineal gland regulation, anti-aging research, and potential longevity applications.

20

SS-31

10mg x 1 Vial

1-5mg per day

A mitochondria-targeted peptide researched for its role in reducing oxidative stress, protecting mitochondrial function, and supporting cardiac health.

PT141 (Bremelanotide)

10mg x 1 Vial

1-2mg per dose

A melanocortin receptor agonist studied for its effects on sexual arousal pathways, libido research, and potential applications in sexual health science.

For research purposes only. Not for human consumption.
